

The Moon

The moon moves around the earth. It looks like a light in the night sky, but the moon is very dark. There is only light coming from it because of the sun. The sun is shining on some part of the moon at all times. Have you ever noticed that the moon changes shape? Sometimes it's a circle. Sometimes it is a crescent. Sometimes it is a half circle. The different shapes of the moon depend on where the sun is shining. There are no gases on the moon. This means there is no air. We could not breathe on the moon without a spacesuit. There is no rain or wind on the moon. Gravity is a force that keeps us on the ground. If you drop something, it will hit the ground. That is gravity working. The moon has a little bit of gravity. It does not have as much as Earth. If you jump really high on the moon. it would take a while to come back down!
