

Downloading Canvas Courses to Use Offline

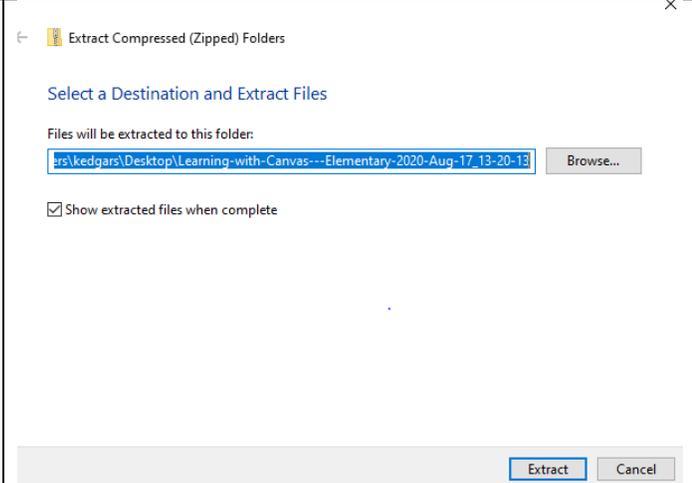

<p>Log into your Canvas account.</p>	
<p>Open the course you need to download and go to Modules.</p>	
<p>Click on Export Course Content</p>	
<p>This will start the download of your course. This may take a few minutes depending on the size of the course.</p>	
<p>Once the download is complete, it will pop up a window asking where to store the download on your device. It will save where you determine as a Compressed (zipped) folder.</p>	
<p>Next, you will have to open the compressed folder to retrieve the content.</p>	

If you have software on your device to open a compressed folder, you will need to click on Extract All.

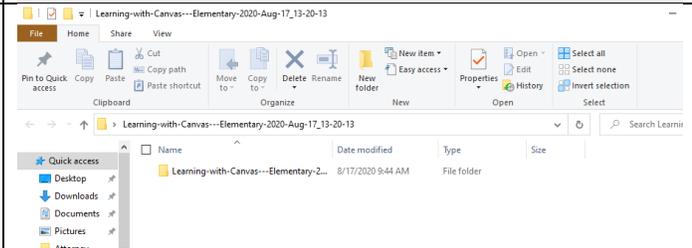

If you don't have software to open a Zipped file, search apps like WinZip or RAR.

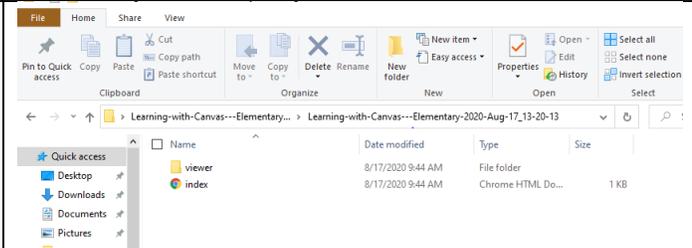

Select your destination for your unzipped file and click on Extract.

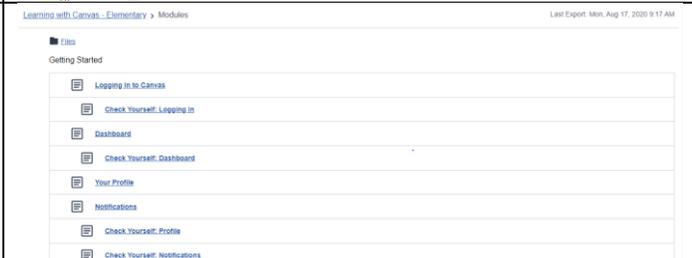

Double-click to open your unzipped file.

Then, double-click on Index. This will open your course content even when you do not have Internet access.

It will show the modules as links that you can click on to advance through the course.

Note: In the upper right hand corner, the date that you downloaded the modules is listed. This date will change each time you download modules so that you can always keep the latest files from your course.
