

2024 Enh. Algebra Summer Work

Kathryn Bergeron

To be successful in Enhanced Algebra: Concepts & Connections, you will need to use previous skills learned in 6th and 7th grades. Your summer work is meant to reinforce those skills so that you are prepared for the course in August and introduce you to a few new concepts that we will be starting with in August. This is a required assignment and will count towards your minor assignments category in the first semester. Choosing not to complete the summer work on time or at all will negatively affect your performance and your grade in the class. Read the instructions carefully to know exactly what you need to do!

STEP 1:

- Use the following link to access the Khan Academy class:
<https://www.khanacademy.org/join/RMH55QSY>

STEP 2:

- Complete the Course Challenge in order to fill in topics that you have already mastered.

STEP 3:

- Work through each module and complete the course topics. You must complete the course to 80% in order to earn full credit for your summer work.

The due date is Monday, August 5, 2024.

When school starts for the 2024-25 school year, the expectation is that you have mastered the summer work concepts and can readily apply those concepts.

If you have questions, you are welcome to email me. Please know that my school email will be checked weekly over the summer break.

Sincerely,

Ms. Kathryn Bergeron
